"Even if you are not a blender, and I will not go into what that is, you can listen to some incredible music." What's the story? It is a PATCHED HD online player in the style of retro-synth music with the convenience of having a video background, light screensaver, and MP3 & WAV playback (and CD player!). This is an alternative to the \$200-\$600 HDTVs, and it works great on tablets and portable HD devices. It is easy to use. Music quality is great, even for those of us who are not audiophiles, as you can adjust the volume from 0-100% with the sliders. Get the music you like from any source: Internet radio and MP3 players YouTube On-demand streaming music CDs What is PATCHED HD? A PATCHED HD player is a versatile and inexpensive way to add HD and SRS (sub-woofer) surround sound audio to a monitor, television, or portable media player. It works by connecting two input jacks, and it is plug-and-play! It plugs in the "hot" input, and then you plug in the "cold" input on the other side. It plays back FLAC, MP3, WAV, and even uncompressed 24-bit/96Khz/24-bit stereo music. You can set up up to four inputs, and even add a Subsonic (S/PDIF) or Optoma (O/SPDIF) receiver. It has several output options: SPDIF (Optoma) (O/SPDIF) THD (OPTOMA) (O/THD) CODEC HDMI (Optoma) 5V (OPTOMA) Which input should I use? Use whichever input you are used to, as you will be able to control all the settings without needing to touch the remote. You can also use the same input that you are using for your laptop or TV, with the small, black wireless remote. The sound quality is good enough that it will work for a variety of purposes, even if you are not a sound expert. You can use either AC or battery, and you can even use a battery that 82157476af
